

# Civil Engineer/Project Manager

## Job Description

McNally, Doolittle is currently seeking a **Project Manager/Civil Engineer** to join our site/civil department in our **Oakland, NJ** office. This is an excellent career opportunity for a self-motivated and talented individual to join a team of outstanding professionals, and the opportunity to mentor entry-level staff in the application of the latest technology to help our clients solve their most challenging problems. Typical projects involve site/civil design for public, institutional, commercial and industrial site development projects.

## Responsibilities

- Project Manager responsible for client relationship management.
- Planning Board and Board of Adjustment professional engineering testimony.
- Site/civil development including grading design, roadway design, storm water management systems design, and erosion and sediment control design, using AutoCAD.
- Preparation of all associated calculations, reports and spreadsheets.
- Collaborating and managing design teams in all aspects of a given project to develop detailed design documents for construction plans.
- May also conduct code research, write specifications, and obtain permitting.
- Assist with site plan approvals in the area.
- Complete construction cost estimating.

## Required Skills & Required Experience

- B.S. in Civil Engineering required;
- Seven (7) years or more experience directly related to the design and execution of Land Development Projects required.
- Professional Engineering license in New Jersey is required.
- Experience with AutoCAD, Microsoft office is required
- Experience providing professional engineering testimony at public hearings.
- Must have excellent written and verbal communication skills.
- Ability to work in a team environment.
- Ability to communicate effectively with clients, coworkers, regulatory agencies, and subcontractors.
